

Dear Sirs

This words is in regards to my interest in applying for the recently posted through your website.

With my skill-set and competencies I am more than able to cover the position request via maintenance processes, monitor networking and security systems, management and analyze the largest amount of received data via business system

While pursuing a bachelor degree in Computer Engineering and its science I reverse skills in databases, computer networks, graphic design, automated systems and reliability equipment.

I started my career as maintenance technician in med-company for trading computers and its components in 2000 for four years, then I moved to work for one year with KSA (Khaled Said bashmakh – Jeddah, Saudi Arabia) Company branch in Syria, Aleppo. Main work in this company was translating the graphic publishing into Arabic Language and verification of matching the Arabic text with English terminology to present the book in easy way to the local reader as three releases (Easy – Professional and Expert).

After Graduation I worked as network courses trainer for a few months then employed as I.S. Administrator in Orient Gate for Travel Retail which manage the duty free shops in Syria (HQ and 7 shops around Syria), that was on 2006 till now.

This position was turning point in my career (Large Company, huge network and the best retail system in the world).

My duties and responsibilities is:

- Administer MS Dynamics Navision System for retail and prepare Sales, commission, and Analysis reports (Daily, Weekly - Monthly - Quaterly - Yearly).
- Solving Hardware and software problems on POS, Servers, and workstations.
- Administer, Monitoring, and maintaining Shop Network (Domain Controller - File Server - Antivirus Server - Backup System) on both hardware and software.
- Preform Backup procedures and monitoring the system and backup state.
- Training staff on new software, system upgrades and performing a good reporting about their works.
- Assisting IT team in company (HQ and other shops) on problem troubleshooting and test all upgrades before they will be in action.
  
- Follow up the periodic maintenance procedures for all hardware equipment and reporting about its status.
- Follow up IT fixed assets for its tranfers between locations, maintenance or disposal procedures.
- Monitoring DVRs sttus, its HDD and Cameras to verify that the Monitoring system is reliability and its case is stable localy and via network.
- And more ...

Today I be a full stack developer with web design / develop skills through multi layers:

- 1- Server, Network and hosting environment (Windows Platform).
- 2- Graphic Web Designer (Adobe Photoshop).
- 3- Data Modeling, Administration (MS SQL Server 2008 R2) and Dynamic access layer.
- 4- Business Logic Layer with .net framework (4.5).
- 5- API Layer, Presentation Layer.

- 6- User Interface and front End (HTML – CSS - JS).
- 7- Testing and validation.

Finally I have the pleasure to express my interest and hereby for the above subject position.

Kindest regards

Eng. Ayham Atiyah
